Serial No.: 10/736,958 Examiner: Gerald Gauthier

Amendment to the Claims

1 (Currently Amended). A method of providing Web-based directory services to establish a voice communication session with an IP-based telephone, said method comprising the steps of:

populating a database with directory entries, each entry being associated with an entity and including information relating to establishing a voice communication session with the entity;

receiving, in an Internet accessible server in communication with the database, a user request to provide directory information, wherein the request includes an address to which the requested information may be sent;

transmitting directory information from the server to the address included in the request, the directory information including at least one directory entry;

receiving in the server a request to establish a voice communication session with the entity associated with the at least one directory entry;

determining a manner of establishing voice communication with the user; and

initiating the requested voice communication session using a conferencing system coupled to the server by initiating a call to at least one of the entity and the user <u>by initiating a voice call to the user and waiting until the call to the user has been terminated at a user device to initiate a voice call to the entity;</u>

determining that the voice call to the entity has not been terminated within a predetermined time period; and

transmitting a message to the user indicative of the non-responsiveness of the entity.

2 - 3 (Canceled).

4 (Currently Amended). The method of claim 3 1, wherein the message is an audio message transmitted to the user via the voice call terminated at the user device.

5 (Currently Amended). The method of claim $\frac{3}{2}$, wherein the message is transmitted to the user via the Internet.

Serial No.: 10/736,958

Examiner: Gerald Gauthier

6 (Original). The method of claim 1, further comprising the step of monitoring the voice

communication session, if any, to determine when the voice call to any party has been ended.

7 (Original). The method of claim 6, further comprising the step of ending the voice calls to all

parties upon determining that the voice call to any party has been ended.

8 (Original). The method of claim 7, further comprising the step of transmitting a query to each

party, if any, for which a voice call is still in progress asking if the remaining voice calls, if any,

should be terminated.

9 (Original). The method of claim 1, further comprising the step of transmitting, prior to the

step of transmitting directory information from the server, a request for information relating to

the user.

10 (Original). The method of claim 9, wherein the requested information relating to the user

includes a password.

11 (Original). The method of claim 9, further comprising the step of receiving information in

response to the request for user-related information.

12 (Original). The method of claim 11, wherein the directory information transmitting from the

server varies as a function of the information received in response to the request for user-related

information.

13 (Original). The method of claim 1, wherein the step of determining a manner of establishing

voice communication with the user comprises the steps of transmitting a query to the user and

receiving a response.

Serial No.: 10/736,958 Examiner: Gerald Gauthier

14 (Original). The method of claim 1, wherein the step of determining a manner of establishing

voice communication with the user comprises the steps of transmitting a query to a database in

the user and receiving a response.

15 (Original). The method of claim 1, further comprising that step of storing billing information

relating to the voice communication session, if any, so that at least one of the entity and the user

can be billed for charges incurred, if any.

16 (Currently Amended). A system for providing Web-based directory services in response to a

request from a user to establish a voice communication session with an IP-based telephone,

comprising:

a server in communication with Internet for receiving requests for the Web-based

directory services and for transmitting directory information to the user;

a database in communication with the server for storing information relating to at least

one Web-based directory, the Web-based directory including an IP address for establishing voice

contact relating to at least one entity; and

a conferencing system for placing a voice call to the user and to the at least one entity in

response to a user request in an attempt to establish a voice communication session between the

user and the entity by initiating a voice call to the user and waiting until the call to the user has

been terminated at a user device to initiate a voice call to the entity, the conferencing system

further for determining that the voice call to the entity has not been terminated within a

predetermined time period and transmitting a message to the user indicative of the non-

responsiveness of the entity.

17 (Original). The system of claim 16, wherein the system monitors the voice communication

session, if any, to determine when it ends.

18 (Original). The system of claim 17, wherein the at least one entity is allowed to alter

information relating to it that is stored on the database.

Serial No.: 10/736,958 Examiner: Gerald Gauthier

19 (Original). The system of claim 17, wherein the system verifies the identity of the user prior

to placing a voice call to the at least one entity.

20 (Original). The system of claim 17, wherein the system verifies the identity of the user prior

to transmitting directory information to the user.

21 (Original). The system of claim 16, wherein the Web-based directory includes information

relating to a plurality of entities.

22 (Original). The system of claim 21, wherein the conferencing system if for placing a voice

call to the user and to each of a selected number of the plurality of entities to establish a voice

communication session between the user and the selected entities.

23 (Original). The system of claim 22, wherein the selected number of the plurality of entities is

selected by the user.

24 (Original). The system of claim 16, wherein the IP-based telephone is operable according to

the session initiation protocol (SIP).

25 (Canceled)
